## **Response to calls for Service**

Calls for service are the primary service provided to the citizens of Morgantown. The response to those calls is tracked by MECCA 911 from the time the call is received to the actual enroute / on-scene time of the officers. The city is divided into a variety of patrol zones and officers are assigned calls within those zones. Effectiveness of zone allocation and call response is monitored by the time it takes to respond to those calls within the patrol zone.

Victimization Ratio is the number of Victims divided by the number of arrests. This shows a comparative relationship to the number of arrestees and the number of victims.

## Victimization

Victimization is an indicator of how crime affects the public. There are a variety of ways to measure victimization, but as a means of simplicity the comparison of the arrests resulting from all cases and the victims from all cases gives a fairly accurate snapshot of total victimization. Specific crimes are analyzed separately
